

ABSTRACT

A headphone device according to the present invention includes an earpad (5) to be worn from the outside of the ear (15) on the head (14), and a housing (4) that is provided with a speaker unit as well as a fitting portion (8) on which the earpad (5) is fit. The earpad (5) comprise a cushion (9) and a facing (10) that covers the cushion (9). The earpad (5) can be attached to and detached from the housing (4). By means of making it possible to detach the facing (10) from the cushion (9) as well, a headphone device can be obtained, in which the earpad can be kept clean and that have improved hygiene.
